

# Weave Your Web with

Spider Learning, Inc.

At Spider Learning, Inc., we empower school partners to develop their professionals and unlock the potential of Open Educational Resources (OER) for their students. Through a three-part professional development series, educators will learn how to use OER to promote student personalization and agency through Learning Pathways. Each session provides not only valuable information, but also includes opportunities for resource and pathway vetting, hands-on curation, and instructional planning.

## What Are Learning Pathways?

First, educators will understand the concept of Learning Pathways and define the elements required to create a comprehensive, skill-aligned Learning Pathway.

## When to Use Learning Pathways

Next, educators will analyze their instructional methods and determine opportunities to incorporate Learning Pathways into their classroom environments.

## Why Learning Pathways Work

Finally, educators will reflect on student data, analyze trends, and draw conclusions between student achievement and Learning Pathway efficacy.

### Identify

### Deliver

### Reflect

What do I need?

Can I use it?

When will students access it?

How will students access it?

How do I implement change?

What technology will be used?

Is it appropriate?

How is it delivered to students?

How are resources analyzed?

How will data be collected?
